

To connect to the database use this info:

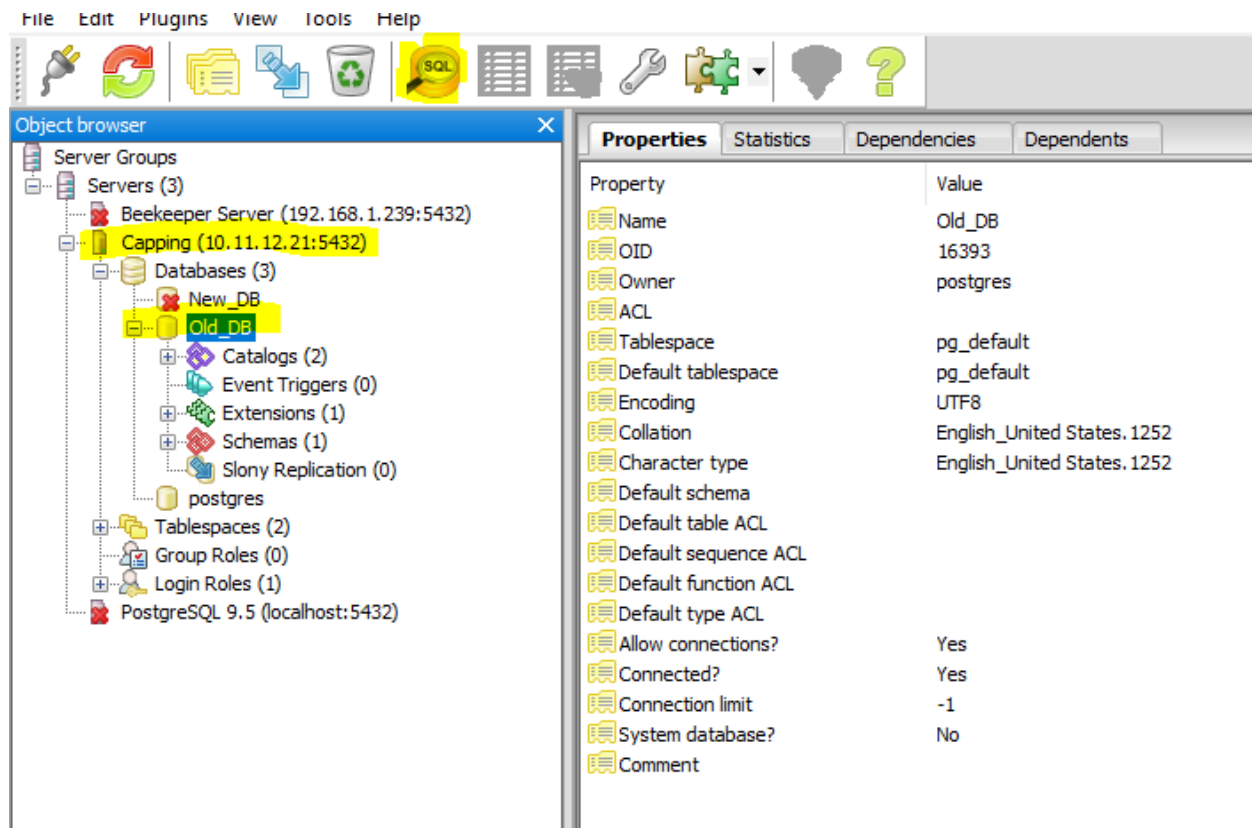

Download Postgres 9.5 it comes with PGAdmin 3. Link: <http://get.enterprisedb.com/postgresql/postgresql-9.5.9-1-windows-x64.exe>

Once downloaded, launch pgadmin. Once launched, add server connection by click the plug button in the top left corner.

Fill in the fields as shown in the image. Password is going to be **Password1** .

Once you are connected, click on the Capping server, in the list on the left hand side. Click on the small plus sign to expand to the databases under the Capping Server list. Then click on New_DB, make sure the red x goes away once you clicked. **NOTE: The image shows connecting to the Old_DB, do not use that one. That one is the old database from last year.**

Once you do that, click on the sql search glass in the top bar. That will pop open a window that lets you issue SQL code.

You can try this SQL query:

```
select * from people;
```

To run the query highlight it, or it will run everything you have in that window, then click on the green play button in the top bar.

File Edit Query Favourites Macros View Help

Old_DB

SQL Editor Graphical Query Builder

previous queries

```
select Ref_F Name, Condition Description from referrals,reference_condit
```

output pane

Data Output Explain Messages History

	ref_f_name character varying(20)	condition_description character varying(150)
1	John	Substance use/Abuse History
2	John	21 years old or younger
3	Darren	Special Education/IEP/Resource services/504
4	John	Involved with CPS/Foster Care/Preventive Service

You should see the output below, if you did everything correctly. **NOTE: This is output from the old database. The result of your query should be in the same place but will look different from the image.**
